ALFA PRIME gracefield color hardener is formulated dry shake color hardener used for coloring and hardening the freshly placed concrete. **COVERAGE RATE:** Darker colors cover approximately 100 sq ft whereas lighter colors cover roughly around 70-80 sq ft.

For best results, slump should **not exceed 4.5"** because higher the water to cement ratio, more chances of color to be washed out. Before applying, one must read the Tech-data sheet and the SDS by visiting [www.alfaprime.ca](http://www.alfaprime.ca)

\*Custom colors can be made but the prices will be different.
